

helm

Set a destination. An AI navigator steers your money there —
and tells you honestly when it can't.

Kiln NPU inference

XRPL Testnet · AMM

every decision on-chain

THE ZONE — one builder, *agent products* end to end.

Minsung Park

Founder, THE ZONE. Designs and ships AI-agent products solo — product, design, engine, chain and pitch. Earlier work explored agents competing as strategy "captains"; helm turns that idea into a consumer money product.

Built at GWDC

All helm code was written during the event window (Sep 28–30).
Stack: Node.js, vanilla JS/SVG/canvas UI, xrpl.js, Kiln API (Bricksum NPU cloud). One runtime dependency.

9

asset classes tokenized on XRPL, from T-bills and 국채 to memecoins

3

live Track A runs: sail, re-plan, decline — every step on-chain

2

Kiln calls per voyage; everything numeric is code

1

runtime dependency; no build step

There are a hundred ways to grow money — and the winner *changes every year.*

2022	2023	2024	2025	2026 YTD
T-bills	Solana	Dogecoin	Gold	S&P 500
+1%	+609%	+389%	+60%	+12%
Solana -93%	Korea 10Y +3%	Korea 10Y -5%	Dogecoin -56%	Dogecoin -30%

People pick one style, ride it into a storm and sell at the bottom. Advisors never say "this goal is impossible". Nobody makes **switching strategy** simple, honest and accountable.

Best / worst of 9 asset classes per calendar year, weekly closes (Yahoo Finance), from helm's own market snapshot.

Say where you want to go. helm charts the odds, *sails*, re-plans — or declines.

1

A destination, in words

"\$10,000 → \$15,000 in 3 years, 30% dip at most, no memecoins." You sign it on-chain as a charter.

2

Real odds, then a course

8 courses × 3,000 simulated voyages on real prices. The navigator only sets sail when the odds are on your side.

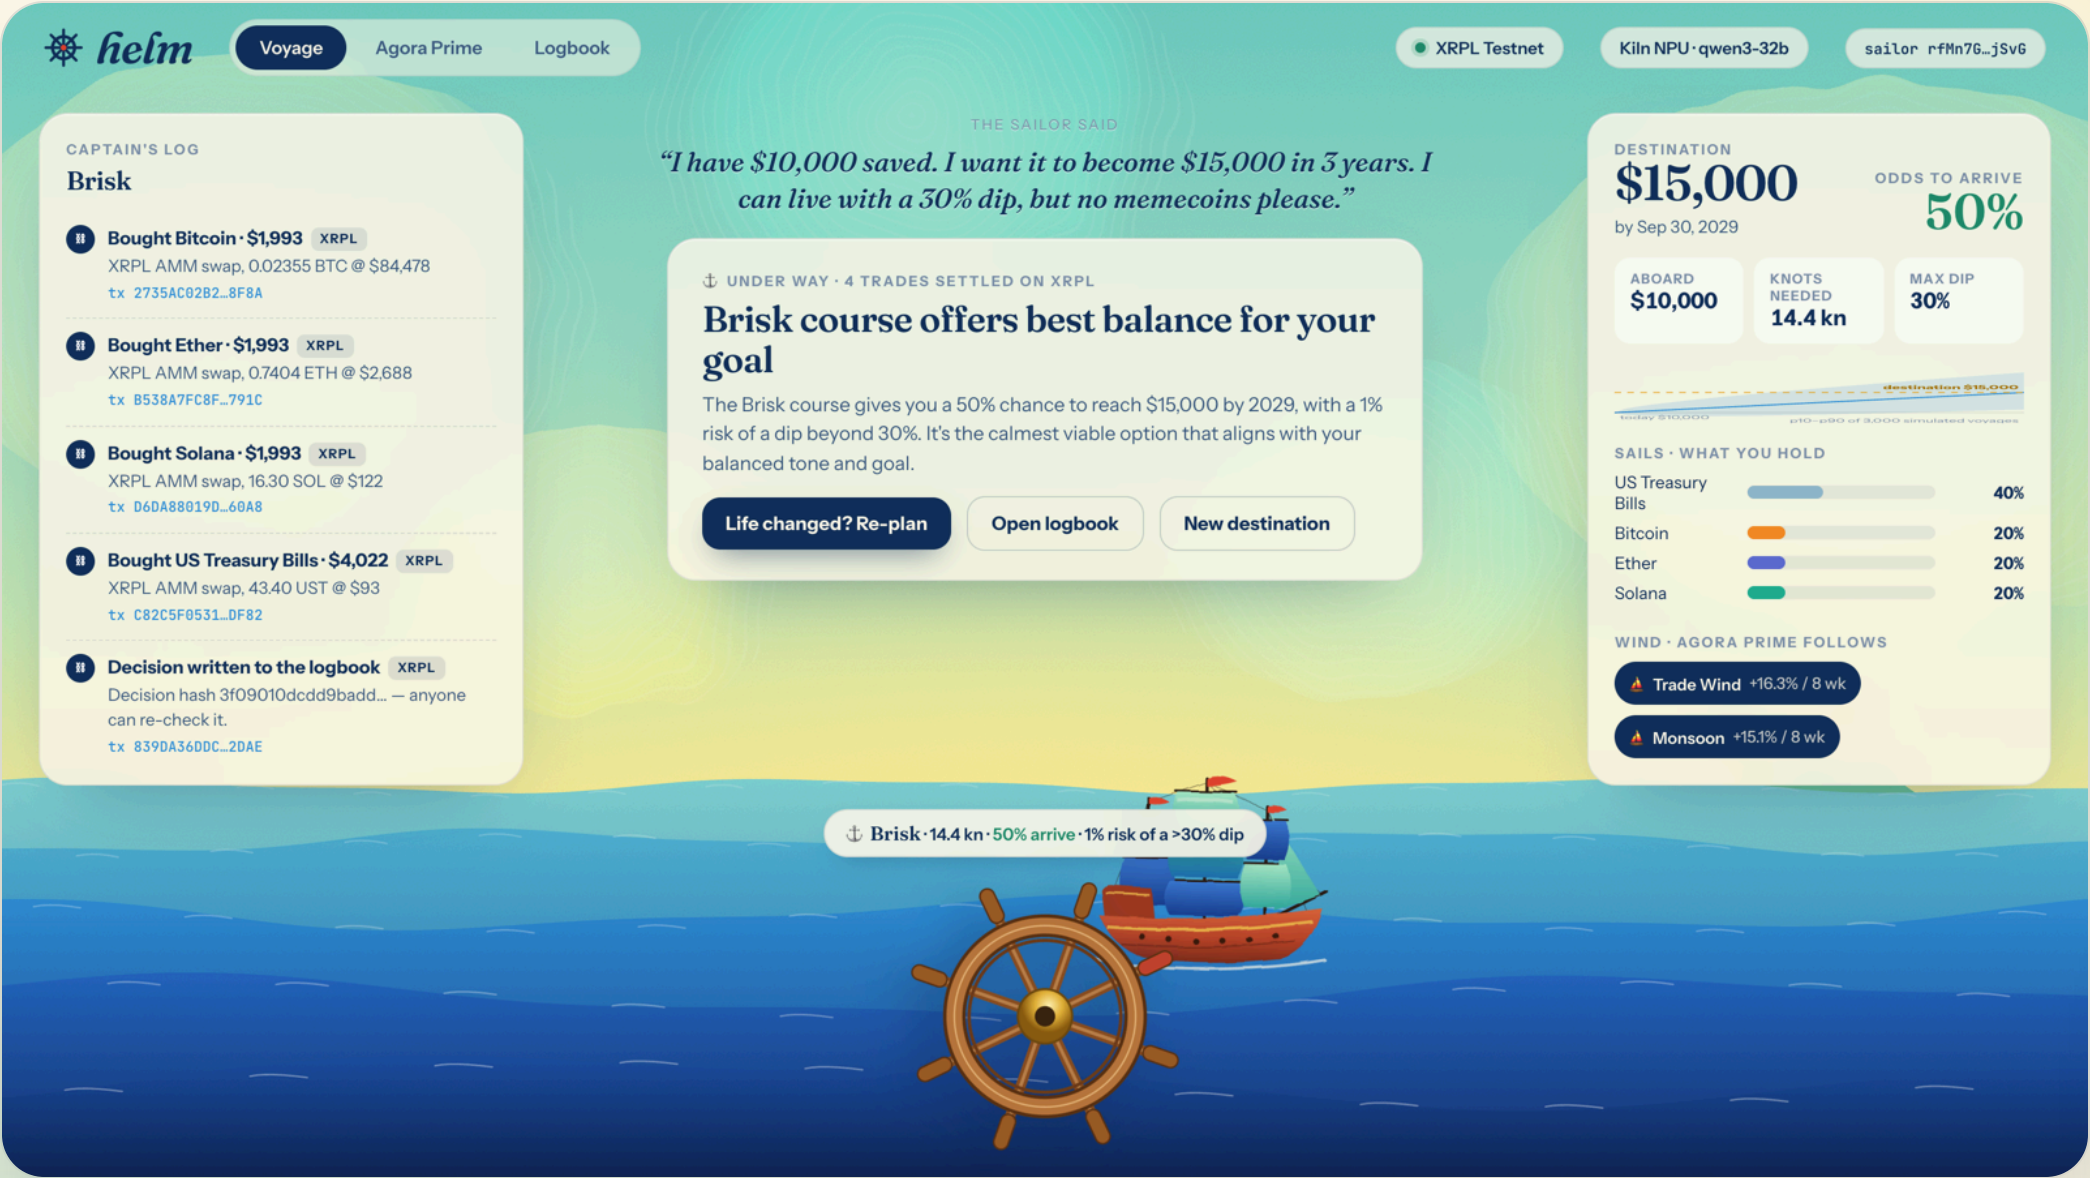

3

Agora Prime steers

It follows whichever strategy captains have the wind and tacks when the lead changes — every trade and decision lands on XRPL.

Money as a game you can actually win: a helm to turn, knots of speed, a destination on the horizon — and one rule: **don't capsize**.

A voyage, a regatta and a logbook.

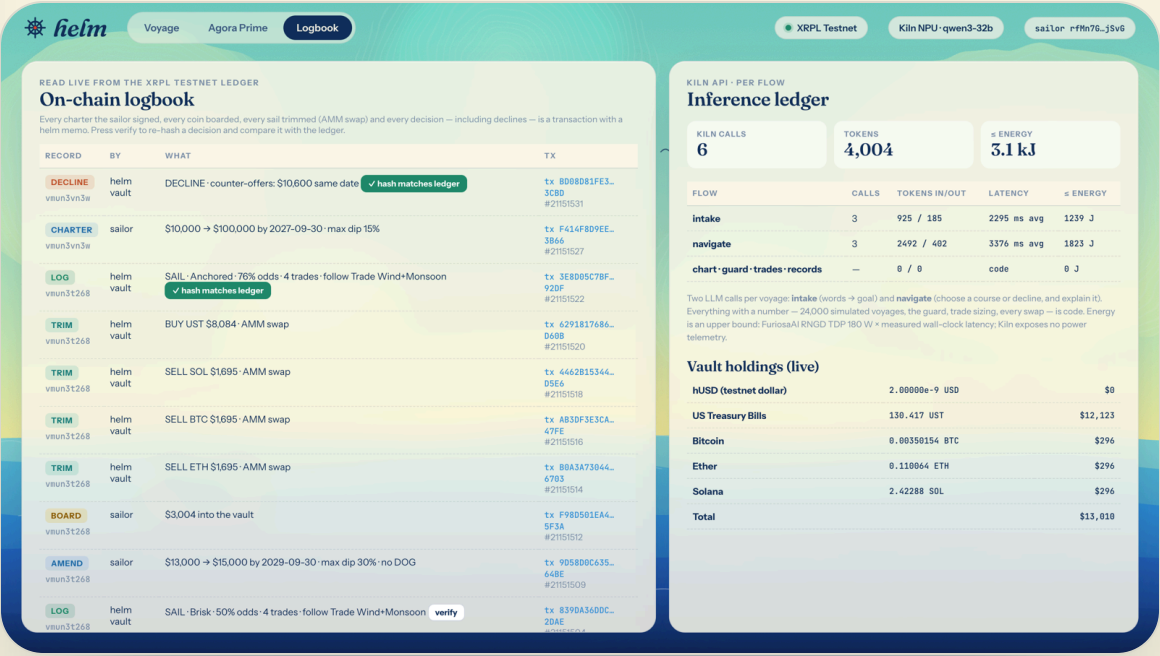

Voyage — the captain's log streams every live step

Kiln calls, XRPL transactions, the odds, your sails. Turn the helm to preview any course.

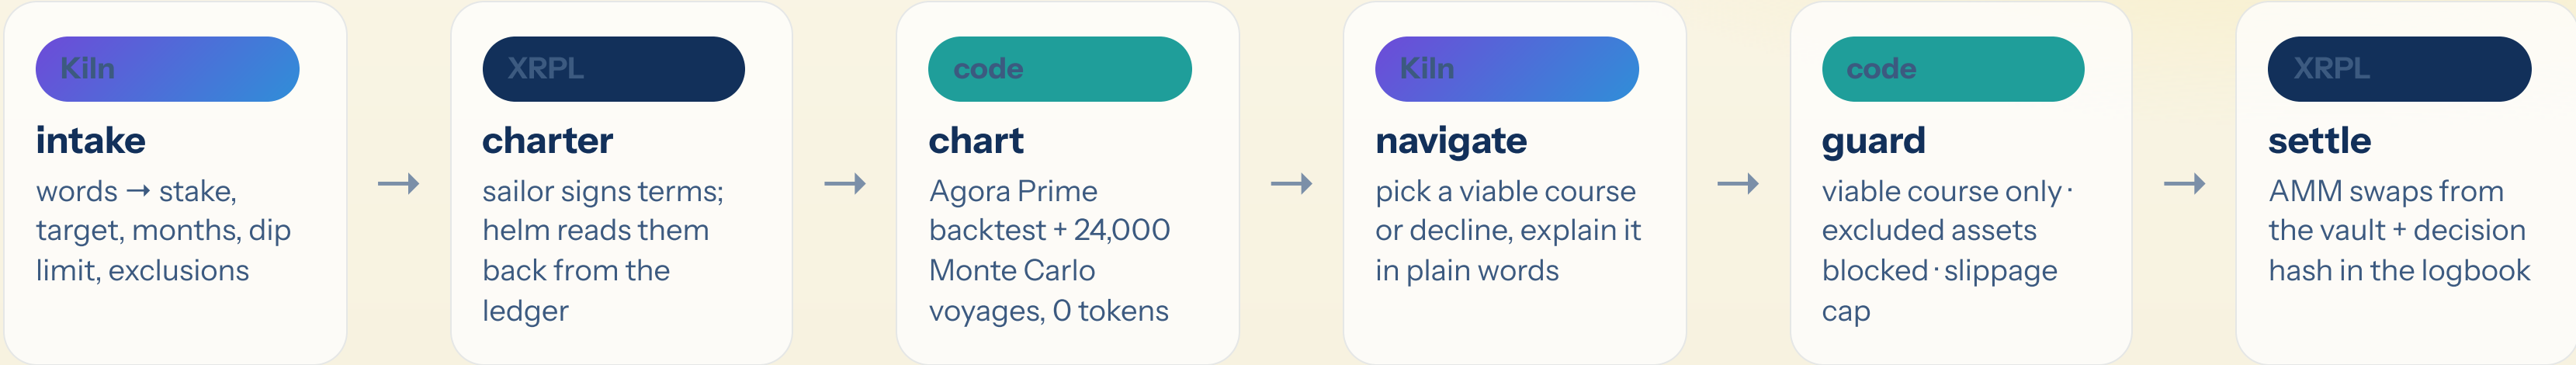

Agora Prime regatta — six captains race real markets; set your dip limit and watch who capsizes.

Logbook — read live from the ledger; verify re-hashes any decision.

The model chooses. *Code* holds every number and every key.

2 LLM calls / voyage

No agent loop burning tokens.
`/no_think` keeps Qwen3 reasoning at ~1 token. Energy logged per call.

Chain is the source of truth

Reads charters, vault balances and AMM prices from XRPL; writes charters, swaps, decisions and declines as memo'd transactions.

Tokenized every asset

9 asset classes as XRPL tokens with AMM pools seeded at real prices — T-bills and 국채 trade next to BTC.

Normal. Budget changed. Impossible.

RUN	THE SAILOR SAID	HELM DID	ON-CHAIN
R1	“I have \$10,000 saved. I want it to become \$15,000 in 3 years. I can live with a 30% dip, but no memecoins please.”	SAIL · Brisk · 50% odds · +BTC +ETH +SOL +UST	7 txs · 839DA36DDC...
R2	“Good news — I got a bonus and I am adding \$3,000. Same goal: \$15,000, same date. I would rather sleep well now.”	SAIL · Anchored · 76% odds · -ETH -BTC -SOL +UST	7 txs · 3E8D05C7BF...
R3	“Turn \$10,000 into \$100,000 by next October. I cannot stomach losing more than 15%.”	DECLINE · 0% odds · offers \$10,600 same date · no money moved	2 txs · BD08D81FE3...

intake

3 calls · 1,110 tokens · 2.3 s avg · ≤1.2 kJ

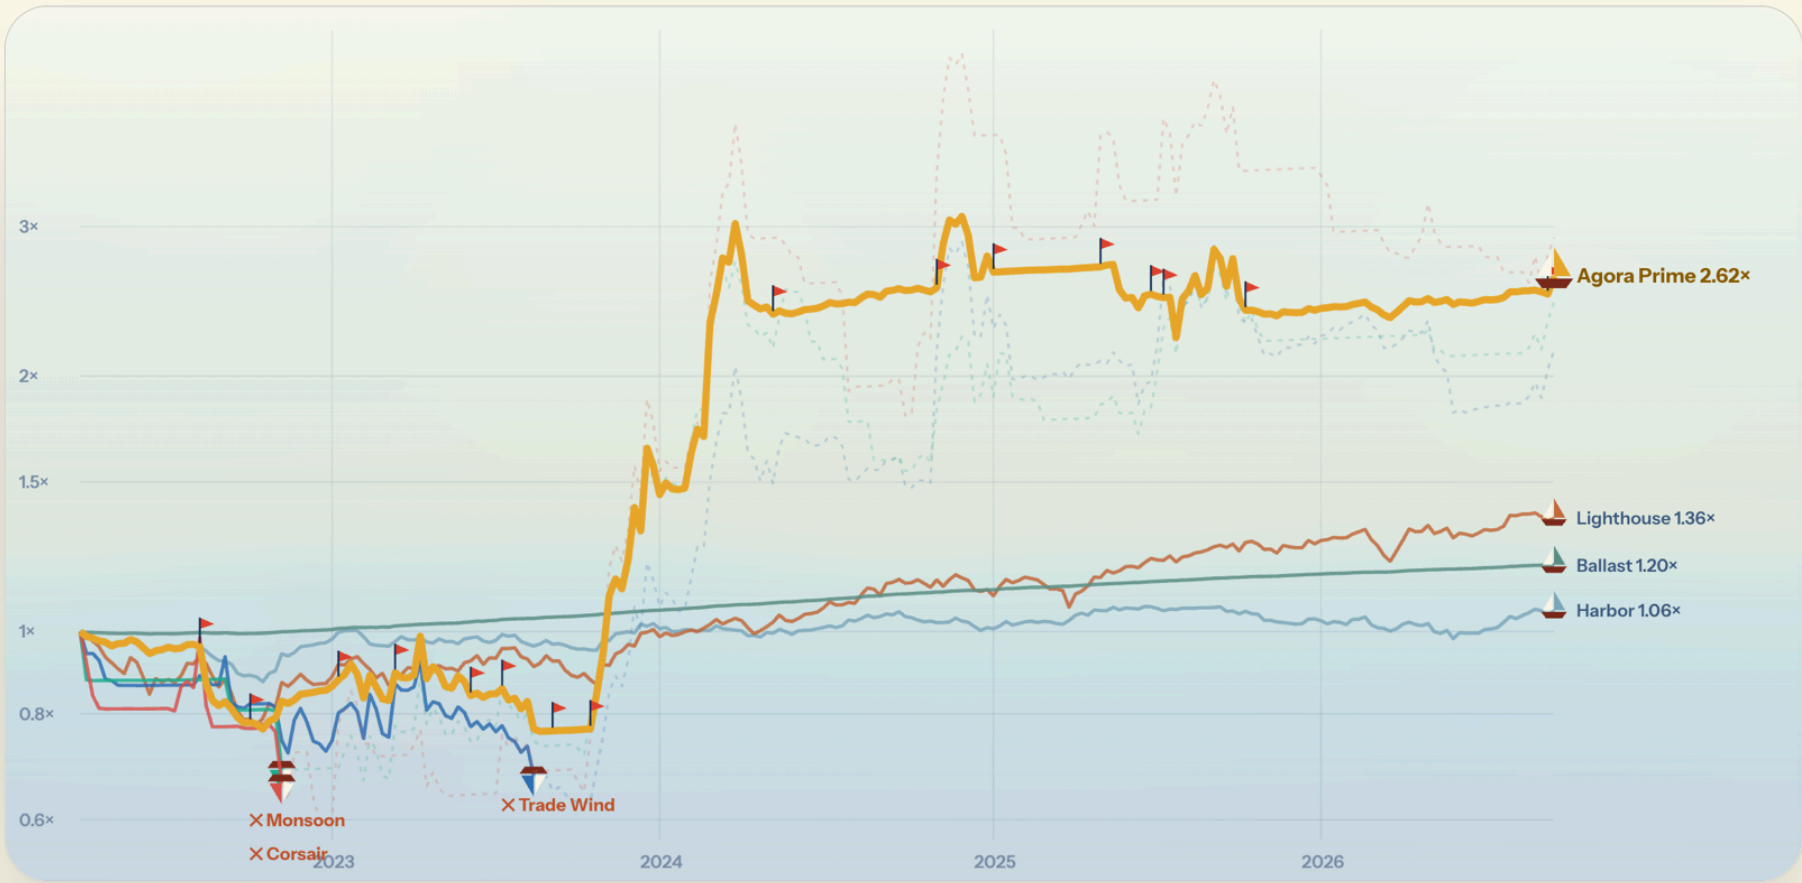

navigate

3 calls · 2,894 tokens · 3.4 s avg · ≤1.8 kJ

code + chain

24,000 simulated voyages, guard, sizing, every swap and record: **0 tokens**.

Inside a 30% dip limit, *nobody beats Prime.*

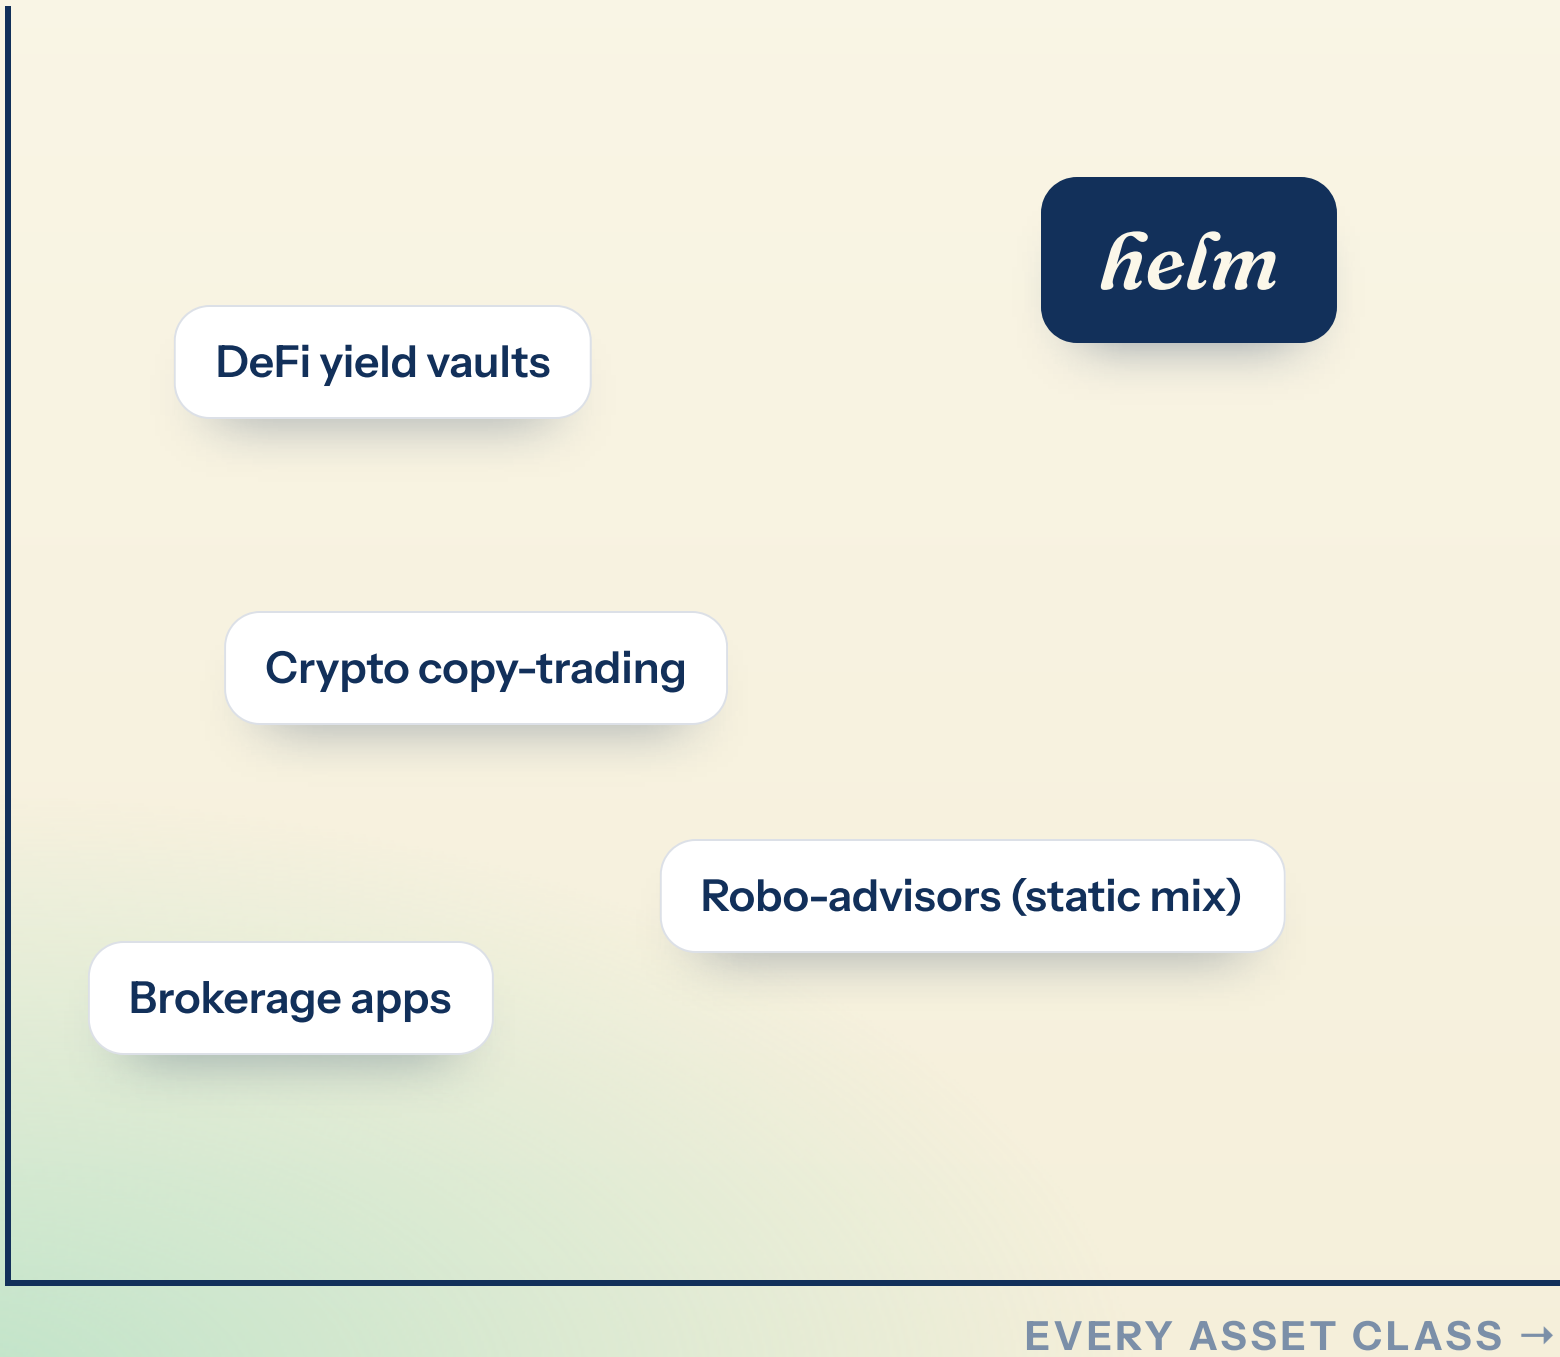

APR 2022 → SEP 2026

	GROWTH	WORST DIP
★ Agora Prime · Full sail	2.62×	-28%
Agora Prime · Fresh breeze	1.71×	-19%
Corsair (SOL + memecoin)	2.91×	-55% ✕
Monsoon (crypto trend)	2.44×	-43% ✕
Trade Wind (cross-asset momentum)	2.14×	-37% ✕
Lighthouse (stocks/bonds/REITs/gold)	1.36×	-22%
Harbor (T-bills + Korea 10Y)	1.06×	-13%

Weekly, after 0.2% swap costs. ✕ = capsized at a 30% dip limit. Parameters were chosen on this same window (in-sample); out-of-sample validation is on the roadmap. Not investment advice.

Everyone sells one boat. helm sells *the navigator*.

AGENT SWITCHES STRATEGY FOR YOU ↑

Who it's for

Savers with a real goal — a deposit, tuition, early retirement — who hold bits of everything and don't know when to switch.

Why now

T-bills, bonds and funds are being tokenized on public chains; low-power NPU inference makes a per-user navigator cheap enough to run for everyone.

Business

AUM fee on voyages under sail; a captain marketplace where outside strategies race in the regatta and earn a share when Prime follows them.

From testnet voyage to *everyone's navigator*.

Now

Track A on XRPL Testnet: charter, odds, sail, re-plan, decline — all on-chain, 2 Kiln calls per voyage.

Next

Weekly "watch" in code (0 tokens) that tacks automatically; the LLM only wakes when the plan or your life changes.

Then

Real tokenized T-bill funds, stock and REIT tokens; prediction-market and yield captains; out-of-sample regatta seasons.

Later

Open captain marketplace, family voyages, KRW rails and 국채 on-chain.

Money grows fastest when you never capsize.
